Dr. Michael Bitzer joins as Member of Advisory Board

DataVaccinator deepens expertise and network in MENA health sector

Luxembourg, 24 November 2023 – With immediate effect, Dr. Michael Bitzer will join the DataVaccinator Advisory Board. He will contribute his extensive knowledge in health ecosystems in Middle East and North Africa (MENA) and his skills in building digital healthcare businesses in MENA and Europe.

"DataVaccinator's innovative software enables the healthcare sector to generate high quality health data from multiple sources and make it available for analytics on demand. By streamlining the entire workflow from curation, de-risking and structuring of data to securely collecting and provisioning such data for analytics, DataVaccinator facilitates and automates many of today's cumbersome steps", states Dr. Bitzer. "Without such solutions, the sharing of data among all stakeholders, from clinics and healthcare organizations to Life Science companies would be prohibitively expensive. The smart automation applied by DataVaccinator makes this company an important contributor to better healthcare."

"As we expand to MENA, Dr. Bitzer joins our Board just in time.", says Kurt Kammerer, CEO. "With a population of nearly 600 million that is served by a variety of heterogeneous healthcare systems, the MENA region provides both opportunities and challenges. With Michael Bitzer, we have now a physician executive on board who served in C-level roles in UAE and Saudi Arabia for over 20 years. He was the founding CEO of Daman, the leading health insurer in the UAE. Jointly, we will make our MENA operations a lasting success."
